

STORE MANAGER *Classic* RETAIL SOFTWARE

POINT OF SALE JUST GOT EASIER! IMAGINE A FLEXIBLE, YET SIMPLE POS APPLICATION WITH THE VERSATILITY TO POWER RETAIL, SERVICE AND RENTAL OPERATIONS RIGHT OUT OF THE BOX - PROXIS STORE MANAGER DOES IT ALL

Powerful, Feature Rich and User Friendly

Store Manager's unlimited product database, intuitive lookups, reporting and back office modules provide the foundation for successful operations. Look up products manually by SKU, product code, description or simply scan bar coded items at point of sale. Search for existing customers by Name, Company or Customer Codes.

Integrated, customizable reporting ensures access to critical business data whenever you need it. Back office accounts receivable and inventory management functionality allows control over billing and purchasing.

Dedicated To Compatibility

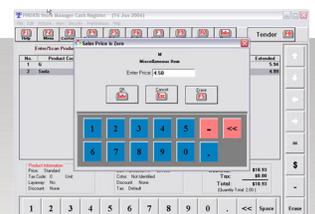

Store Manager features a user interface for both touch screen and traditional monitors built right in, eliminating the need for duplicate versions or costly upgrades if your hardware changes.

Store Manager is certified for use with a variety of popular receipt printers, pole displays, monitors, scanners, card readers and cash drawers.

Integrated PC Charge or X-Charge software for convenient, Internet based credit card processing. SQL and MS Access compatibility permits data integration between Store Manager's database and other important business applications. A Quickbooks interface creates files for import directly into Quickbooks General Ledger accounts.

Built-In Barcode Label Generation

With Store Manager's built in barcode software, Code Name: Zebra, creating scannable item tags is fast and simple. Code Name: Zebra supports printing of Code 39 (Code 3 of 9) barcodes using the product information contained in the Store Manager product database. Print labels on any standard 8.5 x 11" label stock right to a full sized desktop laser or inkjet printer. Label inventory, then scan and tender for improved accuracy and faster service at the point of sale.
